Declaration of Academic Integrity

Academic Integrity is a central tenet of Singapore Polytechnic. The polytechnic rules state that "Cheating in examinations and other assessed work is a very serious offence. This includes copying and using plagiarised material. Any student who cheats, attempts to cheat or breaches any rules for examinations and tests will face disciplinary action. The student is liable to be expelled."

Check **only one** of the two options below:

☐ I affirm that the work I submit is my own, produced without help from any AI tool(s) and/or other source(s).

☐ I affirm that the work I submit has been produced with the use of AI tool(s) and/or other source(s) which I have acknowledged fully in the following section.

By signing this form, I declare that the above affirmation made is true, and that I have read and understood the rules stated in Students Handbook on "Plagiarism" and "Breach of Examination/Assessment Rules".

Name: Isaac low zu le .	Student ID: 2342348	Class: Daaa/1b/06
Signature: X _____	Date: 3/2/2024	

Acknowledgement of use of AI tool(s) and/or other source(s) (where applicable)

AI tool(s)

Name of AI tool	Github Copilot
Input prompt	attributes of a dropdown item
Date generated	30-1-2024
Output generated	In the provided JavaScript code, a new `option` element is being created and added to a `select` dropdown list. The `option` element represents an item in the dropdown list. Here are the attributes being set for each `option` element: 1. `class`: This attribute is used to specify one or more classnames for an element. The class attribute is mostly used to point to a class in a style sheet. However, it can also be used by JavaScript to access and manipulate elements with the specific class name. In this case, the class name is "dropdown-item". 2. `id`: This attribute is a unique identifier for the element. This can be used to style a single specific element, or to select the element using JavaScript. In this case, the id is being set to the `item_id` of the `Item` object.
Impact on submission	This helped me understand what attributes a dropdown item had

Other source(s)

Source	Impact on submission
